Blackwell's Edinburgh Presents Lawrence Whalley: *Understanding Brain Aging and Dementia*. Why do some people remain alert and vigorous at an age when others are declining mentally and physically? Does their apparent advantage have a biological basis, and, if so, could this success be transferred to others predisposed to age more quickly? If this is achievable, does brain aging then become the last obstacle to an extension of our useful life span? Reexamining older scientific studies, Professor Whalley is able to show that though much of what we take for granted about the mental processes of the older person is not simple, we may indeed be able to alleviate the effects of mental deterioration—if not now, then in the future. *Understanding Brain Aging and Dementia* presents a major new synthesis of the science behind dementia, identifying the genetic factors that contribute to the pace of aging and showing how behaviours starting in childhood can influence how we age. Lawrence Whalley is a **Professor of Mental Health at the University of Aberdeen**, specialising in the study of Alzheimer's disease. 6.30pm, [Blackwell's](#), South Bridge. Free tickets may be obtained from the shop's front desk, by calling 0131 622 8229, emailing events.edinburgh@blackwell.co.uk or via eventbrite [here](#).
