

Renowned astrophysicist becomes first woman to be appointed Astronomer Royal for Scotland

Astrophysicist, Professor Catherine Heymans, a world-leading expert on the physics of the so-called dark universe, has become the first woman to be appointed as Astronomer Royal for Scotland.

The prestigious title dates back almost 200 years.

EDINBURGH, UK – May 2021: Professor Catherine Heymans, a renowned astrophysicist and investigator into one of science's great unsolved mysteries has become the first woman to be

appointed as Astronomer Royal for Scotland since the position was created in 1834. Photograph: MAVERICK PHOTO AGENCY

Professor Heymans was recommended to the Queen for the role by an international panel, convened by the Royal Society of Edinburgh. She is Professor of Astrophysics at the University of Edinburgh and Director of the German Centre for Cosmological Lensing at Ruhr-University Bochum.

Her research seeks to shed light on the mysteries of dark energy and dark matter – elusive entities that together account for more than 95 per cent of the Universe.

Created in 1834, the position of Astronomer Royal for Scotland was originally held by the director of the Royal Observatory, Edinburgh. Since 1995, however, it has been awarded as an honorary title. The previous holder, Professor John C Brown, passed away in 2019.

As the eleventh Astronomer Royal for Scotland, Professor Heymans' main focus will be on sharing her passion for astronomy with Scots from all walks of life. One of her first targets is to install telescopes at all of Scotland's remote outdoor learning centres, which are visited by most of the country's school pupils.

Professor Catherine Heymans, of the School of Physics and Astronomy, said: "I don't think anyone forgets the first time they saw the rings of Saturn through a telescope, but too many people never have the chance. As Astronomer Royal for Scotland, I want to change that. My hope is that once that spark and connection with the Universe is made, children will carry that excitement home with them and develop a life-long passion for astronomy or, even better, science as a whole.

"I am absolutely delighted to be named Astronomer Royal for Scotland and, as an advocate for equality and diversity, it is also a great honour to be the first woman appointed to the role. I will enthusiastically use this high-profile platform

to advance amateur and professional astronomy within Scotland, and to promote Scotland internationally as a world-leading centre for science.”

Professor Lord Martin Rees, the current UK Astronomer Royal, said: “It’s excellent news that Professor Heymans has been appointed Astronomer Royal for Scotland. She is a distinguished successor to her predecessors in this role and I wish her a long and successful tenure.”

Professor Dame Jocelyn Bell Burnell, President (interim) of the Royal Society of Edinburgh, said: “The Astronomer Royal for Scotland has always been a distinguished and respected astronomer, and Professor Heymans is exactly that. She will also always be distinguished as the first female to hold the position.”
