# EtherDrops Integrates Linea – Driven by Community, Shaped for the Future

London, March 2024 EtherDrops has seamlessly integrated Linea + Scroll networks into its robust ecosystem. Everyone with networks selected for addresses has been automatically added, setting a new standard in user convenience and efficiency.

Building on its commitment to providing the most comprehensive and user-friendly monitoring solutions, EtherDrops reveals that it is in the advanced stages of integrating additional features. These include the much-anticipated rollout of Mantle, set to commence soon, and the introduction of token tracking on Solana. These enhancements are part of EtherDrops' ongoing efforts to empower users with real-time insights and visibility into their crypto assets.

The decision to integrate Linea and Scroll networks stems from a surge in community requests for such a feature. EtherDrops prides itself on being a community-oriented

platform, where every feedback and request is carefully considered and often leads to action.

"Our integration of Linea + Scroll networks is a direct response to our community's needs"

— said the EtherDrops' CEO.

Users can now monitor up to 20 wallets with a free subscription, a feature designed to make advanced crypto tracking accessible to all. Furthermore, the addition of Scroll to the [Potential Airdrop](#) on DropsTab showcases EtherDrops' role as an important tool for users looking to capitalize on potential airdrops, ensuring they never miss out on opportunities.

About EtherDrops
