

Pain in low back, knees, kidneys, heart, and pelvic area can be treated with Thermobalancing MedTech

Pain is a nasty and troubling symptom that accompanies various health conditions, and often becomes long-lasting. Chronic pain often results in insomnia, anxiety, fatigue, loss of sex drive, and inability to participate in social activities and hobbies. Moreover, up to 85% of people with chronic pain experience severe depression. A safe and effective treatment for chronic pain and the underlying health conditions is thus essential for people's wellbeing.

Clinical studies show superior chronic pain treatment results with thermobalancing medical technology developed by Fine

Treatment, an Oxford-based medical research company. Thermobalancing therapy treats the affected organs and body areas locally, reversing changes in blood microcirculation, that results in effective pain relief.

The main advantage of thermobalancing therapy compared to other treatment options is its total safety. In contrast, all medications, as well as surgeries, are risky and can cause side effects and new undesirable health problems.

Secondly, thermobalancing therapy with easy-to-wear Dr Allen's Devices has been clinically tested and proven to provide effective pain relief in a variety of health conditions, causing upper or low back pain, knee pain, chest pain or angina, kidney pain, or pelvic pain.

Thirdly, the effectiveness of thermobalancing therapy and Dr Allen's Device in relieving pain is due to its local application, without interfering with the normal processes in the body.

Types of pain and diseases treated with Dr Allen's Device and Thermobalancing therapy

Based on the patented thermobalancing medtech solution, several Dr Allen's Devices have been developed to treat a variety of painful chronic conditions and diseases, including knee pain associated with ageing or repetitive stress on the knees causing cartilage tears, tendinitis and arthritis.

Chronic low back pain, especially due to sciatica, lumbar disc herniation, or other non-specific causes, has been successfully targeted with the easy-to-wear Dr Allen's Device.

It was confirmed in a clinical study involving men and women with low back pain, the results of which were published in the World Journal of Orthopedics, titled "Efficacy and safety of thermobalancing therapy with Dr Allen's Device for chronic low back pain: A randomised controlled trial."

Temporary chest pain or discomfort, namely angina, particularly in older adults, can be relieved by wearing Dr Allen's Device, designed as a T-shirt with a special natural thermoelement applied close to the heart area on the side of the rib cage. Patient observations show that thermobalancing therapy naturally improves heart palpitations.

Renal colic is a severe form of sudden flank pain and subsequent discomfort in the back area, which is often experienced by people with kidney stones. Years of clinical observations and a clinical trial have shown that, after emergency painkilling medications for renal colic, sustained pain relief is achieved with the use of Dr Allen's Device over time, and no renal colic is experienced during thermobalancing treatment. The results of this clinical investigation were published in Archives of Nephrology and Urology medical journal, titled "Thermobalancing therapy with Dr Allen's Device dissolves kidney stones improving health-related quality of life measured by the Wisconsin Stone Quality of Life questionnaire".

Another clinical trial showed dramatic pain relief results achieved with Dr Allen's Device in cases of chronic prostatitis or chronic pelvic pain syndrome. These data can be found in the International Journal of Quality Innovation, in "Innovative Thermobalancing therapy and Dr Allen's Device for the first time employ body energy to treat chronic prostatic diseases effectively". Furthermore, a new clinical study has confirmed Dr Allen's Device increases libido and sexual performance in men affected by the troubling symptoms of prostatitis.

Out-of-hospital use of Thermobalancing therapy and Dr Allen's Devices

Positive medical observations and clinical trials confirm high efficacy and safety of Dr Allen's Devices indicating the need for their use as the first-line treatment. Dr Simon Allen, the inventor of non-invasive Thermobalancing treatment option, has been advocating its use ahead of risky surgical interventions or long-term courses of medications, putting patient safety first.

While Dr Allen's Devices can be used by people without prescription, just like regular consumer products, Fine Treatment aims to integrate this safe medical technology with standard clinical pathways to help healthcare systems to provide superior healthcare solutions to patients. Dr Allen's Devices can be used as effective and safe at-home pain management tools either by people themselves, or by medical doctors in the out-of-hospital settings.

Fine Treatment is registered with the UK Department of Business and Trade and works hard to improve the quality of life of people in different countries. The Co-Founder of Fine Treatment Ariana Adjani has given presentations at numerous international healthcare conferences and exhibitions sharing data on thermobalancing therapy's cost-effectiveness and improved patient outcomes.
