

Spadegaming: casino slots with daily winnings

The Asian market today occupies a key position in the plans of slot machine providers. Gamblers from China, Japan, India, and other countries in the region are eager to register in new online casinos. The company Spadegaming is not a manufacturer that came 'from the outside'. The studio originally focused on Asia, and this principle is clearly displayed in the brand's slots.

What does a gambler need to know about Spadegaming?

The firm started in 2007 and initially positioned itself as a supplier for Asian online casinos. The headquarters of the

company is located in the Philippines, but today the company has branches in other countries. By the way, today you can find the games of this company on the platform <https://xtraspins.com/>.

For a long time, the brand was in the shadows. This is not surprising. The gambling industry began its formation in Europe and only in recent years began to actively develop in South America and Asia. This became the starting point. Already today, Spadegaming offices are open in Malaysia, Vietnam, Cambodia, and Indonesia.

The authority of the brand is confirmed by the respect of competitors. European and American developers are actively promoting their software through the platform Spadegaming.

Gambler, when studying the firm's portfolio, should remember the following:

- This is an experienced developer with an extensive line of gambling games. Almost all emulators are dedicated to Asia or reflect the traditions and trends of Eastern culture.
- The provider works exclusively in the segment of video slots. The collection of emulators has several hundred slot machines with different mechanics and principles of the bonus system.
- Spadegaming belongs to the pioneers of HTML5 technology. The developers of the studio prepare games that can be launched without errors through mobile device browsers and mobile applications of online casinos.
- The company is licensed by an international regulator. This certificate is enough to legally provide software to dozens of casinos.

By the way, not so long ago, the entire line of Spadegaming video slots was certified by the Canadian iTechLabs. This is

an auditing organisation that deals with the verification of the random number generator.

How do Spadegaming slot machines differ from slots of other brands?

Almost all games are similar to each other. This is what beginners think. Experienced players know that each provider has its own chip. Exclusive features are sewn into the mechanics and therefore not visible at the first acquaintance with the slot.

Pay attention to the brand's games for the following reasons:

- Free spins are available in most slots. The player will not need a large deposit. The main thing is to get into the round with bonus spins. The slot machine gives out additional multipliers.
- Progressive jackpots. Super winnings await casino customers who are not at all in slots with complex mechanics. The provider offers models with a fruit theme, where there is a special round. Just in this round, visitors to the online casino will have to compete for million-dollar winnings. Cascading symbols. In the configurations of the new wave, the developer uses Megaways technology. This means that the user has the opportunity to activate hundreds and even thousands of paylines and, after each successful spin, to try to win again. For this additional bonus, the slot will not write off a cent.
- Unique options. In the clip, the manufacturer has several games in which the gambler has to prepare for a long session. With each new round, the total multiplier on the bet will grow, and rating points will help to open new free spins.

The theme of Asia permeates the entire collection of the firm. However, the supplier does not forget about technical nuances. Gamers will meet high detailing, a pleasant soundtrack, and a clear payout table.
